

Belkasoft N
Incident investigations

Belkasoft Incident Investigations (Belkasoft N) is a tool for digital incident investigations and is aimed to incident response professionals, working in a corporate environment. The product helps to identify traces left over from malware and hacking attempts on a Windows computer.

<https://belkasoft.com/get>

KEY FEATURES

- Detect suspicious traces in most typical locations, including registries, event logs and less known files
- Analyze how malicious code persisted in the system by analyzing services, scheduled tasks, WMI subscriptions, Applinit DLLs and so on
- Learn how and when malware was executed by examining various artifacts such as Amcache and Shimcache, Syscache, BAM and DAM
- Extract remote connections details including IP and time stamps for RDP and TeamViewer
- Find potential initial attack vector by analyzing recently opened documents and browser links, latest downloads and so on
- Search inside extracted information, bookmark important data and create reports in multiple formats

WHY SHOULD YOU CONSIDER BELKASOFT N?

Quick

Quickly respond to hacker attacks thanks to all necessary data conveniently presented on a single screen.

Comprehensive analysis

Detect impactful security events by analyzing numerous sources, such as registry, event logs, other system files and less known sources.

Search, bookmarking and reporting

Search inside found artifacts, bookmark important data and generate comprehensive incident reports right after the analysis stage.

Compatibility with other tools

Benefit from the analysis functionality of images acquired by Belkasoft X, Belkasoft R, and Belkasoft T as well as by the third-party tools.

Affordable

Comparing to the pricing of the alternative products, it will fit your budget easily.

USE CASES

Endpoint attacks

Malicious email activity

Anomalous user activity

Remote access attacks

Attacks correlation with known vulnerabilities
